JSON ? XML

JSON and XML are both popular ways to represent data. JSON is a lightweight, text-based, language-independent data interchange format. XML is a markup language that defines a set of rules for encoding documents in a machine-readable form.

JSON is a subset of XML. XML is a superset of JSON. XML is more flexible and can represent more complex data structures. JSON is simpler and easier to use.

XML is more flexible and can represent more complex data structures. JSON is simpler and easier to use.

JSON ? XML

JSON is a subset of XML. XML is a superset of JSON. XML is more flexible and can represent more complex data structures. JSON is simpler and easier to use.

It is a lightweight data interchange format. It is easy for humans to read and write. It is easy for machines to parse and generate.

JSON vs XML: What's the difference?

XML (Extensible Markup Language) is a markup language that defines a set of rules for encoding documents in a format that is human-readable and machine-readable. JSON is a lightweight data interchange format. It is easy for humans to read and write. It is easy for machines to parse and generate.

XML is a markup language that defines a set of rules for encoding documents in a format that is human-readable and machine-readable. JSON is a lightweight data interchange format. It is easy for humans to read and write. It is easy for machines to parse and generate.

JSON is a subset of JavaScript. It is a text format that is completely language independent and uses a subset of the JavaScript Programming Language, syntactically based on the ECMA 262 standard.

- JSON is a subset of JavaScript.
- JSON is a text format that is completely language independent.
- JSON uses a subset of the JavaScript Programming Language, syntactically based on the ECMA 262 standard.
- JSON is a lightweight data interchange format.
- JSON is easy for humans to read and write.
- JSON is easy for machines to parse and generate.

JSON is a subset of JavaScript. It is a text format that is completely language independent and uses a subset of the JavaScript Programming Language, syntactically based on the ECMA 262 standard. It is a lightweight data interchange format. It is easy for humans to read and write. It is easy for machines to parse and generate.
