If you're just interested in a free AI chatbot, Copilot will do it for you as well. While the image quality is subjective, ChatGPT did a good job with the image assignments. The character produced for the Back to the Future assignment is just a random kid, but it did show the correct text logo, a DeLorean, and the kid holding a skateboard. I used each chatbot for a few hours straight, with little or no throttling.

DeepSeek failed accessing Yahoo, but it was able to access one of my own sites. So it's possible that Yahoo is blocking DeepSeek's region. My large-context story test resulted in 925 words, well under the number requested. Perplexity returned less of a story and more of a scene setting.

Instead of generating just one image, it generated four. Most were fairly generic, but it made a reasonable attempt. I wouldn't advise using Meta AI for text-based prompts, but you might get a nice image or two out of it.

In this hands-on codelab series, you'll embark on an exciting journey to create your very own intelligent AI agent using Google's Agent Development Kit (ADK). The image tests were worth five points each, for a total of 20 points. Let's first establish something I haven't discussed before.

It gave a very good explanation of the relevance of Latin in today's society. I still can't decide if I think continuing the explain-to-a-five-year-old theme throughout the session was good conversational awareness, or overdone. For example, it correctly identified the Fibonacci sequence, and then went on to explain it at a five-year-old level. It did the same when it analyzed the themes in Game of Thrones' A Song of Ice and Fire, which was somewhat strange considering how dark those themes are. Where ChatGPT fell down was its ability to locate and summarize a current event. My test sends the AIs to look at a Yahoo News article about the flu and provide a summary.
